This document is issued in draft for business review. Section 20 records the open questions that must be closed before progression to Deliverable 2.

1. Document Control

1.1 Document Information

Attribute	Detail
Document title	Business Requirements Document — Internal Transfer Request
Document reference	BRD-OPEP-ITR-001
Platform / product	One-Point Employee Portal (OPEP)
Methodology	INT SDD — Specification-Driven Development / Delivery
Position in SDD chain	Deliverable 1 — Requirement / Discovery Analysis
Preceding input	Business Requirement (Section 3 of the SDD Developer Assessment brief)
Succeeding artefact	Deliverable 2 — Feature Specification (.spec.md) and Acceptance Criteria
Document owner	Portal Product Owner
Document author	Lead Business Analyst
Current version	1.0 — Draft for Business Review
Confidentiality	Internal use only. Contains employee process and policy detail.
Review cycle	Reviewed at Gate 1; baselined thereafter under change control

1.2 Version History

Version	Date	Author	Summary of Change	Status
0.1	DD-MMM-YYYY	Lead BA	Initial discovery draft following stakeholder workshops	Draft
0.2	DD-MMM-YYYY	Lead BA	Incorporated HR eligibility rules and Payroll cut-off constraint	Draft
0.3	DD-MMM-YYYY	Lead BA	Added downstream orchestration requirements and RACI	Draft
1.0	DD-MMM-YYYY	Lead BA	Consolidated document issued for formal business review	For Review
—	—	—	Baseline on approval; changes thereafter via CR process	—

1.3 Distribution List

Name	Role	Function	Purpose
TBC	Portal Product Owner	Digital / IT	Approve
TBC	HR Process Owner — Internal Mobility	Human Resources	Approve
TBC	HR Operations Lead	Human Resources	Review

Name	Role	Function	Purpose
TBC	Payroll Manager	Finance / Payroll	Review
TBC	IT Service Management Lead	Information Technology	Review
TBC	Identity & Access Management Lead	Information Security	Review
TBC	Facilities / Workplace Services Manager	Facilities	Review
TBC	Data Protection Officer	Legal & Compliance	Review
TBC	Solution Architect	Digital / IT	Review
TBC	Delivery Manager	Digital / IT	Inform
TBC	Internal Audit representative	Assurance	Inform

1.4 Approval and Sign-off

Approval of this document confirms that the business objective, scope boundary, business rules and known decisions recorded herein are an accurate and complete statement of the requirement, and authorises progression to Deliverable 2 — Feature Specification and Acceptance Criteria.

Approver Role	Name	Accountable For	Signature	Date
Portal Product Owner	TBC	Scope, prioritisation, benefits realisation		
HR Process Owner	TBC	Policy, eligibility rules, approval authority		
Payroll Manager	TBC	Payroll impact and effective-date treatment		
IT Service Management Lead	TBC	Access provisioning and revocation requirements		
Facilities Manager	TBC	Workplace fulfilment requirements		
Data Protection Officer	TBC	Lawful processing of employee data		
Solution Architect	TBC	Technical feasibility of the stated requirement		

Note: An approver may sign with qualification. Any qualification must be recorded as an Open Question in Section 20 with a named owner and a target closure date.

2. Introduction

2.1 Purpose of this Document

This Business Requirements Document defines the business need for a single, end-to-end digital journey enabling an employee to raise and track an Internal Transfer Request through the One-Point Employee Portal.

The document establishes what the organisation requires and why. It records the agreed business objective, the users of the journey, the stages of that journey, the rules that govern it, the decisions already taken, and the matters that remain open. It is the controlling reference against which the solution design, build and acceptance testing will be traced.

This document deliberately does not specify how the requirement will be delivered technically. The feature specification, acceptance criteria and API contracts are produced in Deliverable 2; the technical approach, data model and failure handling are produced in Deliverable 4 (Technical Plan). Where a technical constraint materially shapes a business rule, it is recorded here as a constraint or a technical decision, not as a design.

2.2 Intended Audience

Audience	How they should use this document
Business approvers (HR, Payroll, IT, Facilities)	Confirm that the objective, rules and scope reflect the intended process, and sign off Section 1.4
Portal Product Owner	Confirm prioritisation, benefits and scope boundary; own the change control of this baseline
Solution Architect and spec author	Use as the authoritative input to the Feature Specification (Deliverable 2) and Technical Plan (Deliverable 4)
Development team	Understand the business intent behind each requirement; refer to the .spec.md for build detail
Test team	Derive spec-derived test cases (Deliverable 3) from the requirements and business rules recorded here
Data Protection and Information Security	Assess data handling, visibility and access control implications
Internal Audit	Understand the control points and audit expectations designed into the journey

2.3 Document Conventions

2.3.1 Identifier prefixes

Prefix	Artefact type	Example
OBJ	Business objective	OBJ-01
KPI	Success measure	KPI-01
BR	Business requirement — a capability the business needs	BR-001
FR	Functional requirement — an observable system behaviour	FR-001
BRL	Business rule — a policy constraint governing behaviour	BRL-001

Prefix	Artefact type	Example
DR	Data requirement	DR-01
NFR	Non-functional requirement	NFR-01
KD-B / KD-T	Known decision — business / technical	KD-B01, KD-T01
A-B / A-T	Assumption — business / technical	A-B01, A-T01
C	Constraint	C-01
D	Dependency	D-01
Q	Open question	Q-01
R	Risk	R-01
OS	Out-of-scope item	OS-01

2.3.2 Prioritisation (MoSCoW)

Priority	Definition	Release treatment
Must	Without this the journey does not meet the business objective and cannot go live	Release 1 — non-negotiable
Should	Important and painful to omit, but a viable workaround exists for a limited period	Release 1 where capacity allows
Could	Desirable; improves the experience but the objective is met without it	Release 1 only if effort is trivial
Won't (this release)	Agreed as excluded from this release; recorded so it is not lost	Deferred backlog

2.3.3 Decision classification

Throughout this document each decision, assumption and open question is classified as either a business or a technical matter. The distinction applied is set out in full in Section 15.3 and is applied consistently so that the correct authority resolves each item.

2.4 Related Documents and References

Ref	Document	Owner	Status

REF-10	SDD Developer Assessment — Employee Internal Transfer Digital Journey	Assessment Owner	Issued

2.5 Position in the SDD Artefact Chain

INT's Specification-Driven Development / Delivery methodology requires an unbroken chain from the stated business requirement through to released software. Each artefact derives from the one before it, and every element must remain traceable in both directions.

	SDD chain step	Artefact	Status
→	Business Requirement	Source brief — Section 3 of the assessment	Input
→	Requirement / Discovery Analysis	This document — Deliverable 1	Current
→	Specification	Feature Specification (.spec.md) and Acceptance Criteria — Deliverable 2	Next
→	Specification	Spec-Derived Test Cases — Deliverable 3	Pending
→	Gate 1	Peer Review of spec, AC, API contract and test cases — Deliverable 9	Pending
→	Plan	Technical Plan — Deliverable 4	Pending
→	Tasks	Task Decomposition and AI Prompts — Deliverables 5 and 7	Pending
→	Test First	Failing (RED) tests derived from acceptance criteria	Pending
→	Implementation	Increment delivered against each task	Pending
→	Gate 2	Evidence, security assessment and traceability — Deliverables 8 and 10	Pending
→	Release	Released journey	Pending

The table below states what this deliverable supplies to each downstream artefact. It is the basis on which forward traceability will be evidenced at Gate 1 and Gate 2.

Downstream artefact	What this document supplies to it
Deliverable 2 — Feature Specification	Journey stages (Section 7), business requirements (Section 8), functional requirements (Section 9) and business rules (Section 10) become the behavioural statements of the specification
Deliverable 2 — Acceptance Criteria	The acceptance criteria column against each BR in Section 8 provides the individually identifiable conditions each criterion must express

Downstream artefact	What this document supplies to it
Deliverable 2 — API Contract	The data attributes (Section 11.1), interface needs (Section 13) and status model (Section 7.4) define the resources, fields and state transitions the contract must expose
Deliverable 3 — Test Cases	Business rules (Section 10) supply positive and negative test conditions; the status model supplies state-transition tests; NFRs (Section 14) supply non-functional test conditions
Deliverable 4 — Technical Plan	Known technical decisions (Section 15.2), constraints (Section 17), integration needs (Section 13) and failure-handling rules (BRL-028, BRL-029) bound the technical approach
Deliverable 5 — Task Decomposition	The BR and FR identifiers provide the units against which tasks are decomposed and mapped
Deliverable 8 — Security Assessment	Access and visibility rules (BRL-030 to BRL-036), access-timing rules (BRL-025, BRL-026) and data protection considerations (Section 11.3) define the assessment scope
Deliverable 9 — Gate 1 Review	Open questions (Section 20) and exit criteria (Section 22.1) form the checklist the peer review works against
Deliverable 10 — Gate 2 Evidence	The traceability matrix (Section 21) provides the requirement-to-implementation trace that Gate 2 must evidence

3. Business Context

3.1 Background

The One-Point Employee Portal is the organisation's single front door for employee services, providing access to HR, payroll, IT, learning, facilities and other functions. Its purpose is to remove the burden on employees of knowing which team owns which task, and of navigating multiple disconnected systems to complete a single life event.

The internal transfer process has not yet been brought onto that model. It remains a manual, multi-team process in which the employee acts as the integrator between functions. The organisation has identified internal transfer as a high-value candidate for a single digital journey because it touches six functions, has a defined trigger and a defined completion, and is currently a recognised source of employee frustration and service-desk contact volume.

3.2 Current State (As-Is) Process

The process as it operates today comprises eight steps executed largely in sequence across separate systems and channels.

Step	Activity	Accountable	System / channel	Nature
1	Employee discusses the proposed transfer with their manager	Employee	Informal — conversation, email	Manual, unrecorded
2	Manager confirms the transfer	Current Line Manager	Email	Manual, unstructured
3	HR validates eligibility against policy	HR	HR / Core HCM system	Manual check
4	Employee organisational information is updated	HR Operations	HR / Core HCM system	System update
5	Payroll is updated where applicable	Payroll	Payroll system	Conditional, manual trigger
6	IT provisions new access and removes redundant access	IT	ITSM / IAM tooling	Conditional, manual trigger
7	Facilities arranges the new workplace location	Facilities	Facilities system	Conditional, manual trigger
8	Employee receives confirmation	HR	Email	Manual

Steps 5, 6 and 7 are conditional — they apply only where the transfer affects pay, access or physical location respectively — but in the current process that conditionality is judged informally, and the trigger to each function depends on an individual remembering to send it.

3.3 Pain Points

Ref	Pain point	Root cause	Business impact	Severity
P1	No single entry point for raising a transfer request	Process initiated informally by conversation or email	Requests are inconsistent, incomplete and occasionally lost entirely	High

Ref	Pain point	Root cause	Business impact	Severity
P2	No visibility of request status for the employee	Status exists only in the heads and inboxes of individual actors	High volume of chase contacts into HR, IT and Facilities service desks	High
P3	Sequential manual hand-offs between functions	Each function waits to be told, rather than being triggered automatically	Extended cycle time; employee starts the new role without being set up	High
P4	No visibility of who owes the next action	No workflow assigning a named owner to each pending step	Requests stall silently; no basis for escalation	High
P5	Employee data re-keyed across HR, Payroll, IT and Facilities	No orchestrated data flow between systems	Inconsistent records; rework; data quality defects	Medium
P6	No auditable record of approval and eligibility decisions	Decisions captured in email or not at all	Cannot evidence that policy was applied; audit exposure	Medium
P7	Downstream teams engaged late or not at all	Conditional steps depend on individual recall	Employee arrives with no desk, no access or incorrect pay treatment	High
P8	No management information on internal mobility	No structured data captured about transfer volumes or cycle times	Cannot measure or improve the process	Low

3.4 Problem Statement

Problem Statement

An employee wishing to transfer internally must today coordinate six functions across five systems and three informal channels, with no consolidated record of the request, no visibility of its status, and no accountable owner for the next action.

The consequence is an extended and unpredictable cycle time, a significant volume of avoidable service-desk contact, inconsistent application of transfer policy, and employees arriving in a new role without the pay treatment, system access or workplace they need in order to be productive.

3.5 The Opportunity

The One-Point Employee Portal already holds the employee relationship, the authentication context and the connections into HR, Payroll, IT and Facilities services. The opportunity is to shift the burden of integration from the employee to the portal: the employee raises one request, and the portal orchestrates every downstream activity, reports consolidated progress, and names the stakeholder holding any outstanding action.

4. Business Objectives and Success Criteria

4.1 Primary Business Objective

Primary Objective

To provide employees with a single, self-service, end-to-end digital journey for initiating and tracking an internal transfer through the One-Point Employee Portal, with the portal acting as the orchestrator of all downstream activities across HR, Payroll, IT and Facilities, and as the single source of truth for the status of the request.

4.2 Supporting Objectives

Ref	Supporting objective	Addresses pain point
OBJ-01	Establish one authoritative entry point and one authoritative record for every internal transfer request	P1, P6
OBJ-02	Give the employee real-time visibility of request status and of the stakeholder holding the pending action	P2, P4
OBJ-03	Reduce end-to-end cycle time by eliminating manual hand-offs and enabling parallel downstream fulfilment	P3
OBJ-04	Reduce status-chase contact volume into the HR, IT and Facilities service desks	P2
OBJ-05	Apply eligibility and approval rules consistently and systematically rather than by local interpretation	P6
OBJ-06	Produce a complete, auditable record of who requested, approved, validated and fulfilled each transfer	P6
OBJ-07	Ensure Payroll, access and workplace arrangements are correct and in place by the effective date	P5, P7
OBJ-08	Capture structured data to enable measurement and continuous improvement of internal mobility	P8

4.3 Success Criteria and Key Performance Indicators

Baselines are to be established by the business during review; the measures themselves are proposed and agreed here. Targets are recorded in Section 20 as Q-18.

Ref	Measure	Definition	Baseline	Target
KPI-01	End-to-end cycle time	Elapsed working days from submission to Completed status	TBC	TBC — reduction vs baseline
KPI-02	Digital adoption	Percentage of internal transfers initiated through the portal	Approximately 0%	TBC
KPI-03	Status-chase contact volume	Service-desk contacts relating to transfer status, per request	TBC	TBC — reduction
KPI-04	Fulfilment readiness	Percentage of transfers with all applicable downstream tasks complete on or before the	TBC	TBC

Ref	Measure	Definition	Baseline	Target
		effective date		
KPI-05	Employee satisfaction	Satisfaction score captured at journey completion	Not measured	TBC
KPI-06	Late-stage rejection rate	Percentage of requests rejected on eligibility after managerial confirmation	TBC	TBC — reduction
KPI-07	Stalled request rate	Percentage of requests exceeding the agreed SLA at any single stage	Not measured	TBC
KPI-08	Data accuracy	Percentage of completed transfers requiring post-completion correction in HR, Payroll or IAM	TBC	TBC — reduction

4.4 Anticipated Benefits

Benefit type	Benefit	Beneficiary
Efficiency	Elimination of manual hand-offs and re-keying between four functions	HR, Payroll, IT, Facilities
Efficiency	Reduced service-desk contact handling avoidable status enquiries	HR, IT, Facilities service desks
Experience	A single, transparent journey with no need to chase individual teams	Employee
Experience	Employee productive in the new role from the effective date	Employee, Receiving Manager
Control	Consistent, evidenced application of transfer eligibility policy	HR, Internal Audit
Control	Timely and correct access revocation aligned to the effective date	Information Security
Insight	Structured internal mobility data enabling trend analysis	HR, Workforce Planning
Financial	Reduced payroll correction and retrospective adjustment effort	Payroll, Finance

5. Scope

5.1 In Scope

The following are within the scope of this requirement and this release.

Ref	In-scope item	Description
IS-01	Transfer request initiation	Employee-initiated Internal Transfer Request raised and submitted through the One-Point Employee Portal
IS-02	Structured request capture	Capture of proposed department / business unit, location, role, effective date and optional reason from controlled reference data
IS-03	Managerial confirmation	Confirmation, decline or return-for-amendment by the current line manager, and by the receiving manager where applicable
IS-04	HR eligibility validation	Systematic and manual validation of the request against internal transfer policy, with a recorded outcome
IS-05	Organisational record update	Update of the employee organisational information with the agreed effective date in the HR system of record
IS-06	Downstream orchestration	Automated raising, tracking and completion monitoring of Payroll, IT and Facilities fulfilment tasks, executed in parallel
IS-07	Consolidated status view	Single employee-facing view of overall status, stage progress and the stakeholder holding any pending action
IS-08	Notifications	Event-driven notifications to the employee and to each stakeholder at the point an action becomes theirs
IS-09	Withdrawal and amendment	Employee-initiated withdrawal and amendment within defined stage boundaries
IS-10	Escalation and reminders	Reminder and escalation handling where a stakeholder action remains outstanding beyond the agreed SLA
IS-11	Audit trail	Immutable record of every state change, decision, actor, timestamp and reason
IS-12	Exception handling	Defined handling where a downstream task fails, is rejected or cannot be completed
IS-13	Confirmation and closure	Consolidated confirmation to the employee on completion of all applicable fulfilment activity
IS-14	Population	Permanent employees transferring within the same legal entity and country (subject to Q-16)

5.2 Out of Scope

The following are explicitly excluded. Exclusion means the item will not be delivered in this release and is not a requirement against which the solution will be assessed. Any request to include an out-of-scope item after baseline is subject to formal change control.

Ref	Out-of-scope item	Rationale for exclusion
OS-01	Cross-legal-entity, cross-country or	Materially different legal, tax and employment processes requiring

Ref	Out-of-scope item	Rationale for exclusion
	cross-contract transfers	separate design and governance
OS-02	International relocation, immigration, visa and global mobility management	Specialist process governed by HR Mobility with its own systems and approvals
OS-03	External recruitment and vacancy management	Owned by Talent Acquisition as a separate process and toolset
OS-04	Promotion, demotion and grade change as a standalone journey	Distinct process with separate approval authority; may run in parallel with a transfer but is not orchestrated here
OS-05	Salary review, compensation negotiation and bonus adjustment	Confidential compensation process; explicitly excluded from the employee-facing journey
OS-06	Secondments, temporary assignments and job rotations	Different rules, reversal expectations and duration handling
OS-07	Manager-initiated or HR-initiated transfers arising from restructure	This journey is employee-initiated by definition
OS-08	Bulk or mass transfers arising from organisational change	Requires batch processing and a different approval model
OS-09	Contract type changes (full-time to part-time, permanent to fixed-term)	Constitutes a contractual variation with separate legal handling
OS-10	Exit, resignation and offboarding journeys	Separate lifecycle journey on the portal roadmap
OS-11	Performance management and disciplinary processes	Referenced only as an input to eligibility validation; not managed within this journey
OS-12	Learning, onboarding and role-readiness content for the new role	Delivered by the existing learning journey; may be linked to but is not built here
OS-13	Replacement or reconfiguration of the HR, Payroll, ITSM or Facilities systems	The portal orchestrates existing systems; it does not replace them
OS-14	Redesign of internal Payroll, IT or Facilities operating procedures	Only the interface into those functions is in scope; their internal working is unchanged
OS-15	Workforce mobility analytics, dashboards and management reporting	Data will be captured (OBJ-08) but reporting is deferred — see DF-04
OS-16	Offline, paper or email-based fallback process	The portal is mandated as the single entry point; a parallel channel would defeat the objective
OS-17	Integration with third-party or external HR systems outside the organisation	No requirement identified

5.3 Deferred — Candidates for Future Releases

The following have been identified as valuable but are not required to meet the business objective in this release. They are recorded so that they are not lost, and are held in the product backlog.

Ref	Deferred item	Indicative release
DF-01	Internal opportunity marketplace linked directly to the transfer request	Release 2
DF-02	Manager-facing dashboard showing team mobility and open requests	Release 2
DF-03	Pre-submission eligibility self-check for the employee	Release 2
DF-04	Internal mobility analytics and trend reporting	Release 2
DF-05	Native mobile experience beyond responsive web	Release 3
DF-06	Automated onboarding pack generation for the receiving team	Release 3
DF-07	Buddy or mentor assignment in the receiving department	Release 3

6. Stakeholders and Users

6.1 Primary Users

Primary users transact within the journey — they either initiate it, make a decision within it, or complete an activity that it orchestrates.

User	Role in the journey	Key needs	Success looks like
Employee (Requester)	Initiates the request, supplies transfer detail, tracks progress, may withdraw or amend	A simple form, pre-populated where possible; clear status; knowing who holds the next action	Raises one request and is kept informed without chasing anyone
Current Line Manager	Confirms, declines or returns the request; effectively agrees to release the employee	Sufficient context to decide; a low-friction action; visibility of impact on their team	Decides in a single interaction without leaving the portal
Receiving Manager	Confirms acceptance of the employee into the receiving team and role	Confirmation that the role exists, is funded and is appropriate	Knows who is joining, in what role, and from when
HR / HR Operations	Validates eligibility, records the decision, updates the organisational record, owns exceptions	Eligibility inputs in one place; clear exception route; complete audit trail	Applies policy consistently with evidence, without manual chasing
Payroll	Assesses and applies pay, cost centre, allowance and location-driven changes	Advance notice; an accurate effective date aligned to cut-off; a clear statement of what changed	No retrospective corrections after the effective date
IT (Service Management / IAM)	Provisions access required by the new role; revokes access no longer required	Accurate role and department data; adequate lead time; a clear revocation trigger	New access live on the effective date; old access removed on time, not before
Facilities / Workplace Services	Arranges desk or workspace, building access, equipment at the new location	Location, effective date, and any accessibility or equipment needs	Employee has a working, accessible workspace on day one

6.2 Secondary Stakeholders

Secondary stakeholders have a material interest in the journey but hold no transactional step within it.

Stakeholder	Interest	Engagement required
Portal Product Owner	Journey design, prioritisation, adoption and benefits realisation	Accountable — approves this document
HR Process Owner	Policy compliance, eligibility rules, approval authority	Accountable — approves this document
Information Security / IAM	Least-privilege access, timely revocation, segregation of duties	Consulted — reviews access rules
Data Protection Officer	Lawful and proportionate processing of employee data	Consulted — approves data handling

Stakeholder	Interest	Engagement required
Finance / Cost Centre Owners	Cost centre movement, headcount and budget impact	Consulted — confirms funding validation route
Works Council / Employee Representatives	Consultation on process change affecting employees	Consulted where required — see Q-15
Internal Audit	Evidence of approval, eligibility and access controls	Informed — reviews control design
Solution Architect	Technical feasibility and integration viability	Consulted — reviews this document
Learning & Development	Role-readiness for the receiving role	Informed — potential linkage in a later release

6.3 RACI Matrix

R = Responsible (does the work), A = Accountable (owns the outcome), C = Consulted, I = Informed.

Journey activity	Emp	Cur Mgr	Rec Mgr	HR	Payroll	IT	Facil
Raise the transfer request	R/A	I	I	I	—	—	—
Confirm release of the employee	I	R/A	C	I	—	—	—
Confirm acceptance into the receiving role	I	I	R/A	I	—	—	—
Validate eligibility against policy	I	C	C	R/A	—	—	—
Approve an exception to policy	I	C	C	R/A	I	I	I
Update the organisational record	I	I	I	R/A	I	I	I
Apply payroll and cost centre changes	I	I	I	C	R/A	—	—
Provision access for the new role	I	I	C	I	—	R/A	—
Revoke access no longer required	I	C	I	I	—	R/A	—
Arrange workspace and building access	C	I	C	I	—	I	R/A
Monitor overall progress of the request	I	I	I	A	I	I	I
Issue confirmation and close the request	I	I	I	R/A	I	I	I
Handle a failed or rejected downstream task	I	I	I	R/A	C	C	C
Withdraw or cancel the request	R	I	I	A	I	I	I

Note: HR holds overall accountability for progress monitoring and closure because HR owns the transfer policy and the employee record. The portal provides the tooling; it does not remove human accountability.

7. To-Be Business Journey

7.1 Journey Overview

The to-be journey converts eight sequential manual steps into a single orchestrated flow with three decision gates and one parallel fulfilment phase. The employee interacts with the portal only; every other interaction is between the portal and the accountable function.

Three structural changes distinguish the to-be journey from the current process. First, the request exists as a single structured record from the moment of submission, rather than as a series of emails. Second, downstream fulfilment runs in parallel rather than in sequence, because Payroll, IT and Facilities activities have no dependency on one another. Third, the status of every outstanding activity is aggregated by the portal and presented back to the employee, so that progress is visible without enquiry.

7.2 Journey Stage Summary

Stage	Name	Trigger	Primary actor	Exit condition
S0	Explore / Pre-request	Employee considers a transfer	Employee	Employee opens the transfer request form
S1	Initiate and Capture	Employee opens the request form	Employee	A valid request is submitted and referenced
S2	Managerial Confirmation	Request submitted	Current Manager; Receiving Manager	Confirmed, declined, or returned for amendment
S3	HR Eligibility Validation	Managerial confirmation received	HR	Eligible / Not eligible / Eligible with conditions
S4	Organisational Record Update	Eligibility validation passed	HR Operations	Organisational record updated with effective date
S5	Downstream Fulfilment (parallel)	Organisational record update confirmed	Payroll, IT, Facilities	All applicable fulfilment tasks closed
S6	Confirmation and Closure	All applicable fulfilment tasks complete	Portal / HR	Employee confirmed; request set to Completed
S7	Post-transfer Review (optional)	Effective date reached	Employee / Receiving Manager	Feedback captured; record archived

7.3 Stage Detail

S0 — Explore / Pre-request

The employee reviews internal mobility guidance, eligibility criteria and the transfer policy within the portal. No request record is created at this stage.

This stage is informational and exists to reduce the volume of ineligible or ill-formed submissions reaching a manager. It carries no system state and no stakeholder action.

S1 — Initiate and Capture

The employee completes the Internal Transfer Request. The portal pre-populates all known employee data — employee identifier, current department, current role, current location, grade and current line manager — from the HR system of record. The employee is not asked to re-enter information the organisation already holds.

The employee supplies the proposed new department or business unit, the proposed new location, the proposed role or job position, the requested effective date, and optionally a reason for the transfer. The first three are selected from controlled organisational reference lists; free text is not permitted for these fields.

On submission the portal validates the request against the capture rules (BRL-007 to BRL-014), assigns a unique request reference, sets the status to Submitted, and makes the request visible in the employee's tracking view. The request is routed to the current line manager.

S2 — Managerial Confirmation

The current line manager receives the request with full context: who is requesting, from which role and department, to which role, department and location, on what date, and for what stated reason where one has been given.

The manager may confirm the request, decline it with a mandatory reason, or return it to the employee for amendment with a comment. Where the receiving role has a named receiving manager, the request is also routed for their confirmation. Confirmation by the current manager constitutes agreement to release the employee; it does not approve the transfer, which remains an HR decision.

Where the manager does not act within the agreed service level, the portal issues reminders and then escalates in accordance with BRL-018.

S3 — HR Eligibility Validation

HR validates the request against the internal transfer policy. The validation considers tenure in the current role, probationary status, performance and disciplinary standing, notice status, role and grade suitability, headcount and budget availability in the receiving unit, and any location-specific conditions such as right to work or relocation policy.

The outcome is recorded as Eligible, Not Eligible, or Eligible with Conditions. Where conditions are attached, they are recorded against the request and must be satisfied before closure. A Not Eligible outcome requires a reason, which is shown to the employee.

Where the portal can evaluate a rule systematically it does so and presents the result to HR; the decision authority nevertheless remains with HR (KD-B05).

S4 — Organisational Record Update

HR Operations records the transfer against the employee's organisational information in the HR system of record, carrying the agreed effective date. This update is the authoritative trigger for downstream fulfilment: no Payroll, IT or Facilities activity is initiated before it is confirmed (BRL-022).

The HR system remains the system of record for organisational data. The portal does not maintain a competing copy; it holds the request and its orchestration state only (KD-T02).

S5 — Downstream Fulfilment (parallel)

The portal raises fulfilment tasks in parallel to each function for which the transfer is applicable. Applicability is determined by BRL-024, not by individual recall.

Function	Raised when	Typical activities	Timing constraint
Payroll	Cost centre, grade,	Cost centre reassignment; location	Must complete before the

Function	Raised when	Typical activities	Timing constraint
	allowances or a pay-affecting location change applies	allowances; grade or pay change; tax or jurisdiction treatment	payroll cut-off preceding the effective date
IT	The role or department changes access requirements	Provision access for the new role; revoke access no longer required; asset or device changes	New access available on or before the effective date; revocation not before the effective date
Facilities	The physical working location changes	Desk or workspace allocation; building and door access; equipment; parking; locker	Workspace available from the effective date

Each function reports the status of its own task back to the portal. The portal aggregates these into the consolidated employee view, presenting the stakeholder holding each outstanding action without exposing internal task detail that is not relevant to the employee (BRL-030).

A failure or rejection in any one task does not silently stall the request: it moves the request to On Hold and notifies HR for exception handling (BRL-028).

S6 — Confirmation and Closure

When every applicable fulfilment task is complete and any HR conditions are satisfied, the portal issues a consolidated confirmation to the employee summarising the new department, role, location, reporting line and effective date, together with any practical joining information provided by the receiving function.

The request status moves to Completed. The audit record is finalised and retained in accordance with the HR records retention schedule.

S7 — Post-transfer Review (optional)

After the effective date the portal may invite the employee to provide feedback on the transfer experience, supplying the data behind KPI-05. This stage is optional and does not gate closure.

7.4 Request Status Model

The following statuses are presented to the employee. Internal sub-states used by individual functions are not exposed.

Status	Meaning to the employee	Stage	Employee action available
Draft	Started but not yet submitted	S1	Edit, submit, delete
Submitted	Awaiting confirmation from the line manager	S2	View, withdraw
Returned for Amendment	The manager has asked for a change before proceeding	S2	Amend and resubmit, withdraw
Manager Confirmed	Released by the manager; awaiting HR validation	S2 to S3	View, withdraw
Under HR Review	HR is validating	S3	View, withdraw

Status	Meaning to the employee	Stage	Employee action available
	eligibility against policy		
Approved — In Progress	Approved; downstream arrangements are being made	S4 to S5	View
Pending Action — [Stakeholder]	A named stakeholder holds the next action	S2 to S5	View
On Hold	Progress is paused; the reason is displayed	Any	View, contact HR
Rejected	The request has been declined, with a reason	S2 or S3	View, raise a new request subject to BRL-005
Withdrawn	The employee has cancelled the request	S1 to S4	View
Completed	The transfer is confirmed and effective	S6	View, provide feedback

7.5 Journey Control Gates

Three gates control progression. A gate cannot be bypassed, and each records an auditable decision.

Gate	Position	Decision	Authority	Failure route
G1	End of S2	Is the employee released by their manager?	Current Line Manager	Rejected, or Returned for Amendment
G2	End of S3	Is the employee eligible under transfer policy?	HR	Rejected with reason; exception route where applicable
G3	End of S5	Are all applicable downstream tasks complete?	Portal, monitored by HR	On Hold and HR exception handling

8. Business Requirements

Business requirements state the capability the organisation requires. Each is traceable to a business objective and carries a MoSCoW priority and acceptance criteria against which delivery will be assessed.

8.1 Request Initiation and Capture

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-001	An employee must be able to initiate an Internal Transfer Request from the One-Point Employee Portal	Must	OBJ-01	An eligible employee can locate and open the request form from the portal without assistance and without leaving the portal
BR-002	The employee must be able to select the proposed new department or business unit	Must	OBJ-01	Selection is made from a controlled list sourced from organisational reference data; free text is not accepted
BR-003	The employee must be able to select the proposed new location	Must	OBJ-01	Selection is made from a controlled list of valid organisational locations
BR-004	The employee must be able to select the proposed role or job position	Must	OBJ-01	Selection is made from a controlled list of valid roles; the list reflects the selected department where a dependency exists
BR-005	The employee must be able to provide a requested effective date	Must	OBJ-07	The date is validated as a future working day meeting the minimum lead time; an invalid date is rejected with a clear explanation
BR-006	The employee must be able to provide an optional reason for the transfer	Must	OBJ-01	The field is optional; the request can be submitted without it; where provided it is retained and visible to permitted roles only
BR-007	The employee must be able to submit the request	Must	OBJ-01	On submission a unique reference is issued, the record is created, and the request is routed to the line manager
BR-008	The portal must pre-populate all employee data already held by the organisation	Must	OBJ-05	Current department, role, location, grade, manager and employee identifier are displayed and are not editable by the employee
BR-009	The employee should be able to save a request as a draft and complete it later	Should	OBJ-01	A draft persists against the employee and can be resumed, submitted or deleted
BR-010	The employee must be prevented from submitting a request that duplicates an open request	Must	OBJ-05	An attempt to raise a second concurrent request is blocked with an explanatory message referencing the existing request

8.2 Status Visibility and Progress Tracking

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-011	The employee must be able to view the current status of their	Must	OBJ-02	The current status is displayed in the portal and reflects the true state of the request

Ref	Requirement	Priority	Objective	Acceptance criteria
	request at any time			without manual refresh by any team
BR-012	The employee must be able to view the actions pending with other stakeholders	Must	OBJ-02	For each outstanding action the portal names the accountable function or role and the date the action became pending
BR-013	The employee must be presented with a single consolidated view of progress across all functions	Must	OBJ-02	One view shows overall status plus the state of each applicable downstream activity; the employee is not required to visit any other system
BR-014	The employee must be able to view a chronological history of their request	Must	OBJ-06	Each completed stage is shown with its outcome and date, in order
BR-015	The employee must not be exposed to internal commentary between stakeholders	Must	OBJ-02	Internal notes between HR, managers and downstream teams are not visible in the employee view
BR-016	Each stakeholder must be able to view the requests awaiting their action	Must	OBJ-03	A stakeholder can identify their outstanding actions without searching across systems
BR-017	HR must be able to view all in-flight requests and their current stage	Must	OBJ-06	HR can list, filter and open any request and see its full history and current holder

8.3 Approval and Validation

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-018	The current line manager must be able to confirm, decline or return the request for amendment	Must	OBJ-05	All three outcomes are available; decline and return require a reason which is recorded and shown to the employee
BR-019	The receiving manager must be able to confirm acceptance where a named receiving manager exists	Must	OBJ-05	Where applicable the request cannot progress to HR validation without receiving-manager confirmation
BR-020	HR must be able to record an eligibility outcome of Eligible, Not Eligible or Eligible with Conditions	Must	OBJ-05	The outcome, the deciding user, the timestamp and any conditions are recorded against the request
BR-021	The portal must systematically evaluate those eligibility rules that can be assessed from available data	Should	OBJ-05	HR is presented with the result of each automated check; HR retains the decision
BR-022	HR must be able to record an approved exception to an eligibility rule	Must	OBJ-05	An exception records the rule overridden, the justification and the approving user

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-023	A manager must not be able to approve their own transfer request	Must	OBJ-06	Where the requester is the approver, the request routes to the next level of management
BR-024	Every decision must carry a recorded reason where the outcome is negative	Must	OBJ-06	Decline, rejection and return actions cannot be completed without a reason

8.4 Orchestration and Downstream Fulfilment

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-025	The portal must orchestrate all downstream activities arising from an approved transfer	Must	OBJ-03	No stakeholder is required to manually notify another function; all tasks originate from the portal
BR-026	The portal must raise downstream tasks only where they are applicable to the transfer	Must	OBJ-03	A transfer with no location change raises no Facilities task; applicability follows BRL-024 and is evidenced in the record
BR-027	Downstream fulfilment tasks must be executed in parallel, not in sequence	Must	OBJ-03	Payroll, IT and Facilities tasks are raised simultaneously on entry to S5
BR-028	The portal must track the completion status of every downstream task it raises	Must	OBJ-02	Each task has a status visible to HR and reflected in the employee consolidated view
BR-029	The portal must not close a request while any applicable downstream task remains outstanding	Must	OBJ-07	Completed status is unreachable until all applicable tasks report completion
BR-030	The portal must place the request On Hold and notify HR where a downstream task fails or is rejected	Must	OBJ-07	A failed task produces a visible On Hold state with a reason and an HR notification; the request does not silently complete
BR-031	Access revocation must not take effect before the effective date	Must	OBJ-07	Revocation is scheduled for the effective date or later; the employee retains current access until then
BR-032	Access required for the new role must be available on or before the effective date	Must	OBJ-07	Provisioning completes by the effective date; a projected breach is flagged to IT and HR in advance
BR-033	The portal should present HR with the projected readiness of each task against the effective date	Should	OBJ-07	HR can identify requests at risk of not being ready before the date arrives

8.5 Notification, Escalation and Lifecycle Management

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-034	The employee must be notified at submission, at each decision point, and at completion	Must	OBJ-02	Notifications are issued for each defined event in the notification matrix (Section 12)
BR-035	Each stakeholder must be notified when an action becomes pending with them	Must	OBJ-03	The notification identifies the request, the employee, the action required and the due date
BR-036	The portal must issue reminders where a stakeholder action remains outstanding beyond the agreed service level	Must	OBJ-03	Reminders are issued at the agreed interval and are recorded against the request
BR-037	The portal must escalate where an action remains outstanding beyond the escalation threshold	Must	OBJ-03	Escalation follows the path defined by the business (Q-07) and is recorded
BR-038	The employee must be able to withdraw the request before the organisational record is updated	Must	OBJ-01	Withdrawal is available up to the end of S4; after that it requires HR intervention
BR-039	The employee must be able to amend a request that has been returned for amendment	Must	OBJ-01	Amendment is available in Draft and Returned for Amendment states only
BR-040	The employee should receive a consolidated confirmation at closure	Must	OBJ-07	The confirmation states the new department, role, location, manager and effective date in a single communication
BR-041	Notification volume to the employee must not obscure material events	Should	OBJ-02	Routine intra-stage progress is visible in the tracking view rather than pushed as individual notifications

8.6 Audit, Compliance and Data

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-042	Every state change must be recorded with the actor, timestamp, decision and reason	Must	OBJ-06	A complete, ordered and immutable history is retrievable for any request
BR-043	The audit record must be retained in line with the HR records retention schedule	Must	OBJ-06	Retention period is applied automatically; records are disposed of in line with policy
BR-044	Access to a transfer request must be restricted to the parties with a legitimate role in it	Must	OBJ-06	No user can view a request unless they are the employee, an approver, HR, or an assigned downstream actor
BR-045	Remuneration and salary detail must not be exposed within the employee-facing journey	Must	OBJ-06	No pay value is displayed to the employee, the manager or downstream functions within this journey
BR-046	The reason for transfer must be visible only to roles permitted by the business	Must	OBJ-06	Visibility follows the rule confirmed under Q-08 and is enforced by role

Ref	Requirement	Priority	Objective	Acceptance criteria
BR-047	The portal must capture structured data sufficient to report on internal mobility	Should	OBJ-08	Volume, cycle time, stage duration, outcome and rejection reason are captured as structured data
BR-048	The journey must comply with the organisation's accessibility standard	Must	OBJ-01	The journey meets the conformance level defined in REF-08

9. Functional Requirements

Functional requirements describe observable system behaviour derived from the business requirements. They are stated at the level of what the system must do, not how it will be built.

9.1 Request Form

Ref	Functional requirement	Source BR
FR-001	The system shall present an Internal Transfer Request form accessible from the employee's portal home and from the HR services area	BR-001
FR-002	The system shall display the employee's current department, role, location, grade and line manager as read-only context	BR-008
FR-003	The system shall provide a searchable, type-ahead selector for the proposed department or business unit	BR-002
FR-004	The system shall provide a searchable, type-ahead selector for the proposed location	BR-003
FR-005	The system shall provide a selector for the proposed role, filtered by the selected department where a dependency exists	BR-004
FR-006	The system shall provide a date selector for the requested effective date and shall prevent selection of a date that breaches BRL-010 or BRL-011	BR-005
FR-007	The system shall provide an optional free-text field for the reason for transfer, with a defined maximum length	BR-006
FR-008	The system shall validate all mandatory fields on submission and display field-level errors where validation fails	BR-007
FR-009	The system shall reject a submission where the proposed department, role and location are all identical to the current values	BR-007
FR-010	The system shall save an incomplete request as a draft against the employee	BR-009
FR-011	The system shall prevent submission where the employee already has an open request and shall display the existing reference	BR-010
FR-012	The system shall generate and display a unique request reference on successful submission	BR-007

9.2 Tracking and Visibility

Ref	Functional requirement	Source BR
FR-013	The system shall display the current status of the request using the status model defined in Section 7.4	BR-011
FR-014	The system shall display, for each outstanding action, the accountable function or role and the date the action became pending	BR-012
FR-015	The system shall display a stage-by-stage progress indicator covering S1 to S6	BR-013
FR-016	The system shall display the state of each applicable downstream activity within the same consolidated view	BR-013

Ref	Functional requirement	Source BR
FR-017	The system shall display a chronological history of completed stages with outcome and date	BR-014
FR-018	The system shall exclude internal stakeholder commentary from the employee-facing view	BR-015
FR-019	The system shall provide each stakeholder with a list of requests awaiting their action	BR-016
FR-020	The system shall provide HR with a searchable and filterable view of all in-flight requests	BR-017
FR-021	The system shall display the reason recorded against an On Hold or Rejected status to the employee	BR-024

9.3 Approval and Validation

Ref	Functional requirement	Source BR
FR-022	The system shall route a submitted request to the employee's current line manager for action	BR-018
FR-023	The system shall present the manager with Confirm, Decline and Return for Amendment actions	BR-018
FR-024	The system shall require a reason before a Decline or Return for Amendment action can be completed	BR-024
FR-025	The system shall route the request to the receiving manager for confirmation where a named receiving manager exists	BR-019
FR-026	The system shall prevent progression to HR validation until all required managerial confirmations are recorded	BR-019
FR-027	The system shall route the request to HR following managerial confirmation	BR-020
FR-028	The system shall present HR with the outcome of each automated eligibility check and the underlying data	BR-021
FR-029	The system shall allow HR to record an outcome of Eligible, Not Eligible or Eligible with Conditions	BR-020
FR-030	The system shall allow HR to record conditions against a request and shall prevent closure until conditions are marked satisfied	BR-020
FR-031	The system shall allow HR to record an approved exception, capturing the rule overridden, the justification and the approver	BR-022
FR-032	The system shall reroute a request to the next level of management where the approver and the requester are the same person	BR-023

9.4 Orchestration

Ref	Functional requirement	Source BR
FR-033	The system shall initiate downstream fulfilment only after the organisational record update is confirmed	BR-025

Ref	Functional requirement	Source BR
FR-034	The system shall evaluate the applicability of each downstream task against BRL-024 and record the outcome	BR-026
FR-035	The system shall raise applicable Payroll, IT and Facilities tasks simultaneously	BR-027
FR-036	The system shall carry the effective date, the current and proposed organisational values, and the request reference to each downstream task	BR-025
FR-037	The system shall receive and record status updates against each downstream task	BR-028
FR-038	The system shall prevent transition to Completed while any applicable task remains open	BR-029
FR-039	The system shall transition the request to On Hold and notify HR where a downstream task reports failure or rejection	BR-030
FR-040	The system shall schedule access revocation for the effective date or later	BR-031
FR-041	The system shall flag to IT and HR any provisioning task projected to complete after the effective date	BR-032
FR-042	The system shall present HR with a readiness indicator for each request approaching its effective date	BR-033
FR-043	The system shall allow HR to reopen, reassign or manually close a downstream task under exception handling	BR-030

9.5 Notification and Lifecycle

Ref	Functional requirement	Source BR
FR-044	The system shall issue notifications in accordance with the notification matrix in Section 12	BR-034, BR-035
FR-045	The system shall issue reminders to a stakeholder holding an overdue action at the agreed interval	BR-036
FR-046	The system shall escalate an overdue action in accordance with the escalation path defined by the business	BR-037
FR-047	The system shall provide a Withdraw action to the employee up to the end of S4	BR-038
FR-048	The system shall notify all engaged stakeholders when a request is withdrawn	BR-038
FR-049	The system shall permit amendment of a request only in Draft or Returned for Amendment status	BR-039
FR-050	The system shall issue a consolidated confirmation on transition to Completed	BR-040
FR-051	The system shall record every notification issued against the request	BR-042

9.6 Audit and Access Control

Ref	Functional requirement	Source BR
FR-052	The system shall write an immutable audit event for every state change, capturing actor, timestamp, from-state, to-state and reason	BR-042
FR-053	The system shall restrict visibility of a request to the employee, the approvers, HR and assigned downstream actors	BR-044
FR-054	The system shall enforce field-level visibility of the reason for transfer by role	BR-046
FR-055	The system shall exclude all remuneration data from the transfer request record and its views	BR-045
FR-056	The system shall apply the defined retention period to completed and withdrawn requests	BR-043
FR-057	The system shall capture stage entry and exit timestamps to support cycle-time reporting	BR-047

10. Business Rules

Business rules express policy constraints that govern the journey. Where the business has not yet fixed a value, the rule is stated with the value marked TBC and cross-referenced to the relevant open question in Section 20.

10.1 Eligibility Rules

Ref	Business rule	Type	Status
BRL-001	Only active employees may raise an internal transfer request. Employees serving notice or with a recorded leaving date are excluded.	Business	Agreed
BRL-002	The employee must have completed a minimum tenure in their current role before a transfer request may be raised.	Business	Threshold TBC — Q-01
BRL-003	Employees within their probationary period are not eligible unless an exception is approved by HR.	Business	Exception route TBC — Q-02
BRL-004	Employees with an active disciplinary process or performance improvement plan are not eligible without an HR override.	Business	Agreed
BRL-005	A cooling-off period applies between the completion of one transfer and the raising of the next.	Business	Period TBC — Q-03
BRL-006	An employee may hold only one open internal transfer request at any time.	Business	Agreed

10.2 Request Capture Rules

Ref	Business rule	Type	Status
BRL-007	Proposed department, proposed location, proposed role and requested effective date are mandatory. Reason for transfer is optional.	Business	Agreed
BRL-008	Proposed department, location and role must be selected from controlled organisational reference lists. Free text is not permitted for these fields.	Business	Agreed
BRL-009	The proposed values must differ from the current values in at least one of department, role or location. A request with no material change is invalid.	Business	Agreed
BRL-010	The requested effective date must be a future date and must respect the minimum lead time required for downstream fulfilment.	Business	Lead time TBC — Q-04
BRL-011	The effective date must fall on a valid working day and, where payroll treatment is affected, must align to the payroll cut-off schedule.	Business	Alignment approach TBC — Q-05
BRL-012	Current department, role, location, grade and line manager are system-populated and are not editable by the employee.	Business	Agreed
BRL-013	The employee may withdraw the request at any point up to the completion of the organisational record update (end of S4). Thereafter withdrawal requires HR intervention.	Business	Agreed

Ref	Business rule	Type	Status
BRL-014	The employee may amend a request only while it is in Draft or Returned for Amendment status.	Business	Agreed

10.3 Approval and Routing Rules

Ref	Business rule	Type	Status
BRL-015	Confirmation by the current line manager is mandatory before HR eligibility validation may commence.	Business	Agreed
BRL-016	Confirmation by the receiving manager is required where the receiving role has a named receiving or hiring manager.	Business	Universality TBC — Q-06
BRL-017	A manager may not approve their own transfer request. Such a request routes to the next level of management.	Business	Agreed
BRL-018	Where a stakeholder does not act within the agreed service level, the portal issues reminders and then escalates.	Business	Path and timings TBC — Q-07
BRL-019	HR holds the final decision on eligibility. Managerial confirmation alone does not approve a transfer.	Business	Agreed
BRL-020	Any negative outcome — decline, rejection or return for amendment — must carry a reason, which is shown to the employee.	Business	Agreed
BRL-021	A request that crosses legal entity, country or employment contract boundaries is outside this journey and must be identified and redirected at the point of capture.	Business	Agreed

10.4 Orchestration Rules

Ref	Business rule	Type	Status
BRL-022	Downstream fulfilment tasks are raised only after eligibility validation has passed and the organisational record has been updated.	Business	Agreed
BRL-023	Payroll, IT and Facilities tasks are executed in parallel. No downstream task waits on the completion of another.	Business	Agreed
BRL-024	A downstream task is raised only where applicable. Payroll applies where cost centre, grade, allowances or pay-affecting location change. IT applies where the role or department changes access requirements. Facilities applies where the physical working location changes.	Business	Agreed
BRL-025	Access revocation must not be actioned before the effective date, so that the employee retains the access required in their current role until the transfer takes effect.	Business	Agreed
BRL-026	Access required for the new role must be available on or before the effective date.	Business	Agreed
BRL-027	A request may not reach Completed status while any applicable downstream task remains outstanding or any HR condition remains unsatisfied.	Business	Agreed

Ref	Business rule	Type	Status
BRL-028	Where a downstream task fails or is rejected, the request moves to On Hold and HR is notified. The request must not complete silently or bypass the failed task.	Business	Agreed
BRL-029	Where the effective date passes with fulfilment incomplete, the request remains open and is escalated to HR; the effective date is not automatically deferred.	Business	Agreed

10.5 Visibility, Data and Retention Rules

Ref	Business rule	Type	Status
BRL-030	The employee sees the status, the stakeholder holding the pending action, and the date the action became pending. Internal task detail is not exposed.	Business	Agreed
BRL-031	Internal commentary between HR, managers and downstream teams is not visible to the employee.	Business	Agreed
BRL-032	The optional reason for transfer is visible to the current manager and to HR. Visibility to the receiving manager and to downstream functions is restricted.	Business	Confirmation TBC — Q-08
BRL-033	Salary, remuneration and compensation detail is not held or displayed within the transfer request journey.	Business	Agreed
BRL-034	All state changes are recorded with actor, timestamp, decision and reason, and are immutable once written.	Business	Agreed
BRL-035	Transfer request records are retained in accordance with the HR records retention schedule.	Business	Period TBC — Q-09
BRL-036	A user may access a transfer request only where they are the employee, a required approver, HR, or an assigned downstream actor.	Business	Agreed

10.6 Notification Rules

Ref	Business rule	Type	Status
BRL-037	The employee is notified on submission, on each decision, on return for amendment, on hold, and on completion.	Business	Agreed
BRL-038	Each stakeholder is notified at the point an action becomes pending with them, and is reminded while it remains outstanding.	Business	Agreed
BRL-039	Routine progress within downstream fulfilment is reflected in the tracking view rather than pushed to the employee as individual notifications.	Business	Agreed
BRL-040	Every notification issued is recorded against the request for audit purposes.	Business	Agreed

11. Data Requirements

11.1 Request Data Attributes

The following attributes constitute the Internal Transfer Request record. Source indicates whether the value is captured from the employee, derived from a system of record, or generated by the portal.

Ref	Attribute	Source	Mandatory	Notes
DR-01	Request reference	Generated	Yes	Unique, immutable, quoted in all communications
DR-02	Employee identifier	HR system	Yes	Not editable
DR-03	Employee name	HR system	Yes	Display only
DR-04	Current department / business unit	HR system	Yes	Display only
DR-05	Current role / job position	HR system	Yes	Display only
DR-06	Current location	HR system	Yes	Display only
DR-07	Current grade	HR system	Yes	Not displayed to the employee where policy restricts
DR-08	Current line manager	HR system	Yes	Determines approval routing
DR-09	Proposed department / business unit	Employee selection	Yes	Controlled list — BRL-008
DR-10	Proposed location	Employee selection	Yes	Controlled list — BRL-008
DR-11	Proposed role / job position	Employee selection	Yes	Controlled list — BRL-008
DR-12	Requested effective date	Employee entry	Yes	Validated against BRL-010 and BRL-011
DR-13	Agreed effective date	HR	Yes	May differ from requested; drives all downstream scheduling
DR-14	Reason for transfer	Employee entry	No	Restricted visibility — BRL-032
DR-15	Receiving manager	Reference data / HR	Conditional	Where a named receiving manager exists
DR-16	Request status	Portal	Yes	Per the status model in Section 7.4
DR-17	Current pending action holder	Portal	Yes	Displayed to the employee — BR-012
DR-18	Stage entry and exit timestamps	Portal	Yes	Supports KPI-01 and KPI-07
DR-19	Decision outcomes and reasons	Approvers / HR	Yes	Immutable audit content
DR-20	Eligibility conditions	HR	Conditional	Where the outcome is Eligible with Conditions
DR-21	Downstream task references	Downstream systems	Conditional	One per applicable function

Ref	Attribute	Source	Mandatory	Notes
	and statuses			
DR-22	Exception and override records	HR	Conditional	Rule overridden, justification, approver
DR-23	Notification log	Portal	Yes	Recipient, event, timestamp

11.2 Reference Data Requirements

Reference list	Purpose	Authoritative source	Currency requirement
Department / business unit hierarchy	Populates the proposed department selector	To be confirmed — Q-19	Must reflect current organisational structure
Location register	Populates the proposed location selector	To be confirmed — Q-19	Must reflect currently occupied sites only
Role / job position catalogue	Populates the proposed role selector	To be confirmed — Q-19	Must reflect valid, active roles
Employee and organisational data	Pre-populates current-state fields and routing	HR system of record	Real-time or near-real-time
Payroll calendar and cut-off dates	Validates the effective date against BRL-011	Payroll system	Must reflect the current payroll calendar
Working day / holiday calendar	Validates the effective date against BRL-011	To be confirmed	Must reflect location-specific holidays

11.3 Data Protection Considerations

Consideration	Requirement
Lawful basis	Processing is necessary for the performance of the employment contract and for the legitimate administration of the employment relationship. To be confirmed by the DPO.
Data minimisation	Only data necessary to assess and fulfil the transfer is captured. Remuneration data is explicitly excluded (BRL-033).
Purpose limitation	Transfer request data is used for administration of the transfer and for aggregated internal mobility reporting only.
Access control	Role-based restriction per BRL-036; the reason for transfer carries additional field-level restriction per BRL-032.
Retention	Per the HR records retention schedule; period to be confirmed under Q-09.
Employee transparency	Processing is covered by the Employee Data Privacy Notice (REF-02); an update may be required.
Special category data	The journey does not intentionally capture special category data. Free-text reason fields carry a residual risk of volunteered sensitive information — see R-07.

12. Notification Matrix

The following events generate notifications. Channel is indicative; the definitive channel configuration is a specification decision to be confirmed in Deliverable 2.

Event	Employee	Cur Mgr	Rec Mgr	HR	Payroll	IT	Facil
Request submitted	Yes	Yes — action	—	—	—	—	—
Manager confirmed	Yes	—	Yes — action	Yes — action	—	—	—
Manager declined	Yes	—	—	Yes	—	—	—
Returned for amendment	Yes — action	—	—	—	—	—	—
Receiving manager confirmed	Yes	Yes	—	Yes — action	—	—	—
Eligibility outcome recorded	Yes	Yes	Yes	—	—	—	—
Organisational record updated	Yes	—	Yes	—	Yes — action	Yes — action	Yes — action
Downstream task completed	View only	—	—	Yes	—	—	—
Downstream task failed or rejected	Yes — on hold	—	—	Yes — action	Yes	Yes	Yes
Action overdue — reminder	—	If holder	If holder	If holder	If holder	If holder	If holder
Action escalated	Yes	Yes	Yes	Yes	—	—	—
Request withdrawn	Yes	Yes	Yes	Yes	If engaged	If engaged	If engaged
Request completed	Yes	Yes	Yes	Yes	—	—	—
Effective date approaching, fulfilment incomplete	—	—	Yes	Yes — action	If open	If open	If open

"Yes — action" indicates a notification that requires the recipient to act. "View only" indicates the event is reflected in the tracking view without an individual push notification, in accordance with BRL-039.

13. Integration and Interface Requirements

This section states the business need for each interface. It does not specify the integration method or the API contract, which are determined in Deliverable 2 (API contract) and Deliverable 4 (Technical Plan).

Ref	Interface	Direction	Business purpose	Criticality
INT-01	Portal to HR / Core HCM system	Read	Retrieve employee, organisational, manager and grade data to pre-populate the request and drive routing	Critical — blocking
INT-02	Portal to HR / Core HCM system	Write	Record the organisational change with the agreed effective date at stage S4	Critical — blocking
INT-03	Portal to organisational reference data	Read	Populate controlled lists for department, location and role	Critical — blocking
INT-04	Portal to Payroll system	Write / status	Raise the payroll fulfilment task and receive its completion status	High
INT-05	Portal to ITSM / IAM tooling	Write / status	Raise provisioning and revocation tasks and receive their completion status	High
INT-06	Portal to Facilities system	Write / status	Raise the workplace fulfilment task and receive its completion status	High
INT-07	Portal to payroll calendar	Read	Validate the effective date against payroll cut-off per BRL-011	Medium
INT-08	Portal to notification service	Write	Issue notifications to employees and stakeholders	High
INT-09	Portal to enterprise identity provider	Read	Authenticate the user and establish employee context	Critical — blocking
INT-10	Portal to working day / holiday calendar	Read	Validate the effective date as a working day at the proposed location	Medium

Critical dependency

Interfaces INT-04, INT-05 and INT-06 must support both the raising of a task and the return of its status. If a downstream system can accept a task but cannot report completion back, the consolidated progress view required by BR-013 cannot be achieved for that function, and a manual status update mechanism will be required as a fallback.

This is the single most material technical unknown in this discovery and is recorded as open question Q-20.

14. Non-Functional Requirements

Non-functional requirements are stated as business expectations. Measurable targets marked TBC are to be confirmed with Architecture and the Product Owner under Q-24.

Ref	Category	Requirement	Target
NFR-01	Availability	The journey must be available during standard business hours across all operating locations	TBC — aligned to portal SLA
NFR-02	Performance	Page and view load times must not impede completion of the request	TBC
NFR-03	Performance	The consolidated status view must reflect the true current state without requiring manual refresh by any function	Near real-time
NFR-04	Scalability	The journey must support the organisation's expected annual volume of internal transfers with headroom for growth	Volume TBC
NFR-05	Security	Access is authenticated through the enterprise identity provider; no separate credentials are introduced	Mandatory
NFR-06	Security	Authorisation is role-based and enforces BRL-036 at record level and BRL-032 at field level	Mandatory
NFR-07	Auditability	All state changes are immutably recorded and retrievable for the full retention period	Mandatory
NFR-08	Accessibility	The journey conforms to the organisational accessibility standard	Per REF-08
NFR-09	Usability	An employee must be able to complete a request without training or written guidance	Validated by usability testing
NFR-10	Device support	The journey must be usable on the devices employees are issued, including responsive use on mobile	Responsive web
NFR-11	Localisation	Language and locale support must match the portal standard for the operating footprint	TBC — Q-17
NFR-12	Resilience	Failure of a single downstream interface must not prevent the remainder of the journey from progressing	Mandatory
NFR-13	Data integrity	A request must not reach a state inconsistent with the state of the HR system of record	Mandatory
NFR-14	Recoverability	An in-flight request must survive a system restart without loss of state or history	Mandatory
NFR-15	Supportability	Support teams must be able to determine the full state and history of any request without database access	Mandatory

15. Known Decisions

Known decisions are positions already taken and treated as settled input to the solution design. They are not open for reconsideration within this delivery except through formal change control.

15.1 Known Business Decisions

Ref	Decision	Rationale	Decision owner
KD-B01	The One-Point Employee Portal is the single entry point for internal transfer requests	Removes fragmented initiation; a parallel channel would defeat the single-view objective	Portal Product Owner
KD-B02	The portal orchestrates downstream activity rather than acting as a form that hands off by email	Orchestration is the core of the stated business requirement	Portal Product Owner
KD-B03	The employee is provided with a single consolidated view of progress and pending actions	Directly addresses pain points P2 and P4	Portal Product Owner
KD-B04	Managerial confirmation precedes HR eligibility validation	Reflects the agreed process order; avoids HR effort on requests the manager will not release	HR Process Owner
KD-B05	HR retains decision authority over eligibility; the portal does not auto-approve a transfer	Policy judgement and exception handling require human authority	HR Process Owner
KD-B06	Department, location and role are selected from controlled lists; free text is not permitted	Data quality is a precondition of downstream automation	HR Process Owner
KD-B07	The reason for transfer is optional	Requiring justification would discourage legitimate internal mobility	HR Process Owner
KD-B08	Payroll, IT and Facilities involvement is conditional, determined by rule rather than by individual judgement	Not every transfer affects every function; rule-based applicability removes the current reliance on recall	HR Process Owner
KD-B09	Downstream fulfilment runs in parallel	The three functions have no dependency on one another; sequencing them adds cycle time for no benefit	Portal Product Owner
KD-B10	Remuneration detail is excluded from the journey	Compensation is a separate confidential process (OS-05)	HR Process Owner
KD-B11	Cross-entity and cross-border transfers are excluded from this release	Materially different legal and tax treatment; would delay delivery of the core journey	HR Process Owner

15.2 Known Technical Decisions

Ref	Decision	Rationale	Decision owner
KD-T01	The portal holds the	Required in order to present a single	Solution Architect

Ref	Decision	Rationale	Decision owner
	orchestration state and the master status of the request	consolidated view across functions	
KD-T02	The HR / Core HCM system remains the system of record for organisational data; the portal does not duplicate it	Prevents a competing source of truth and consequent reconciliation burden	Solution Architect
KD-T03	Downstream fulfilment is triggered by system integration rather than by manual notification	Manual triggers cannot be tracked, and are the root cause of pain points P3 and P7	Solution Architect
KD-T04	Downstream tasks are executed concurrently with independent completion tracking	Implements KD-B09	Solution Architect
KD-T05	Reference data for department, location and role is consumed from authoritative sources, not maintained within the portal	Avoids drift between the portal and the organisational structure	Solution Architect
KD-T06	Every state transition is persisted as an immutable audit event	Implements OBJ-06 and BRL-034	Solution Architect
KD-T07	Authentication and authorisation reuse the existing enterprise identity model	No bespoke access model is introduced for this journey	Solution Architect
KD-T08	The portal presents aggregated status; it does not expose downstream systems directly to the employee	Protects internal task detail and decouples the employee view from downstream tooling	Solution Architect
KD-T09	Failure of one downstream interface is isolated and does not halt the remaining tasks	Implements NFR-12 and BRL-023	Solution Architect

15.3 Business Decision versus Technical Decision — Classification

Classification principle

A business decision determines what the organisation wants to happen and under what conditions — policy, eligibility, approval authority, sequence of accountability, and what the employee is shown. It is owned by HR, the process owner or the product owner. Changing it changes the process.

A technical decision determines how that outcome is delivered — system of record, integration pattern, orchestration mechanism, data flow and error handling. It is owned by architecture and engineering. Changing it does not change what the business has agreed.

The test applied: if the decision would still need to be made were the process operated entirely on paper, it is a business decision. If it exists only because the process is being automated, it is a technical decision.

Topic	Business decision	Technical decision
Eligibility	Which employees may transfer and the thresholds applied (BRL-001 to BRL-006)	How the rules are evaluated and where the rule logic is configured
Approval authority	Who must approve and in what order (BRL-015 to BRL-019)	How approval tasks are routed, timed out and escalated technically
Effective date	Minimum lead time and payroll cut-off policy (BRL-010, BRL-011)	Date validation logic and scheduling of effective-dated changes
Downstream involvement	Which functions must be engaged and under what conditions (BRL-024)	Integration method used to reach Payroll, IT and Facilities systems
Parallel fulfilment	That the employee should not wait for sequential hand-offs (KD-B09)	Orchestration pattern used to run tasks concurrently and reconcile completion
Status visibility	Which statuses and which pending-action detail the employee sees (BRL-030)	Status aggregation model and refresh mechanism
Access timing	That access is not revoked before the effective date (BRL-025)	Scheduling and triggering of provisioning and de-provisioning
Reason for transfer	That it is optional and who may read it (KD-B07, BRL-032)	Field storage, masking and role-based access enforcement
Audit	That decisions must be auditable and evidence retained (BRL-034)	Event model, storage mechanism and retention implementation
Reference data	That controlled lists must be used (KD-B06)	Which source system supplies each list and how it is kept current
Notifications	That a stakeholder is told when they hold an action (BRL-038)	Channel, template and delivery mechanism
Downstream failure	That a request must not silently complete (BRL-028)	Retry, compensation and exception-handling design
Scope boundary	That cross-border transfers are excluded (KD-B11)	How such requests are detected and redirected at capture
Data protection	What may be captured and who may see it	Encryption, masking and access enforcement mechanisms

16. Assumptions

Assumptions are working positions taken so that discovery can proceed. Each must be validated. Where an assumption is invalidated, the associated requirements are revisited and the impact assessed through change control.

16.1 Business Assumptions

Ref	Assumption	Validate with	Impact if invalid
A-B01	A documented internal transfer policy exists and is current	HR Process Owner	High — eligibility rules cannot be codified
A-B02	The eight-step current process described in Section 3.2 is accurate and complete	HR Operations	Medium — journey stages may require revision
A-B03	Scope is limited to transfers within the same legal entity and country	HR Process Owner	High — materially expands scope and complexity
A-B04	Every employee has an identifiable line manager recorded in the HR system	HR System Owner	High — approval routing cannot be automated
A-B05	Department, location and role structures are actively maintained and current	HR Operations	High — controlled lists would be unreliable
A-B06	All in-scope employees have portal access and can authenticate	Portal Product Owner	Medium — an access route would be required
A-B07	Managers, HR, Payroll, IT and Facilities users will act within the portal or a connected system rather than by email	All function owners	High — the single-journey objective is undermined
A-B08	A transfer does not automatically imply a promotion or grade change	HR Process Owner	Medium — additional approval path required
A-B09	Facilities involvement is required only where the physical location changes	Facilities	Low — applicability rule adjusts
A-B10	Payroll involvement is required only where pay, cost centre or allowances are affected	Payroll	Low — applicability rule adjusts
A-B11	Service levels can be agreed with each function for their step in the journey	All function owners	Medium — escalation cannot be defined
A-B12	The organisation is willing to mandate the portal as the only route for internal transfers	Portal Product Owner	High — adoption and benefits are at risk

16.2 Technical Assumptions

Ref	Assumption	Validate with	Impact if invalid
A-T01	The portal already provides authentication, authorisation and employee context	Portal Architecture	High — foundational capability would be required
A-T02	The HR system can be integrated with for both read and write operations	HR System Owner	High — S4 could not be automated
A-T03	Payroll, ITSM / IAM and Facilities systems can receive an automated task request	Respective system owners	High — orchestration reverts to manual notification
A-T04	Those systems can return task status to the portal	Respective system owners	High — consolidated progress view is not achievable
A-T05	The portal has, or can be provided with, a workflow and orchestration capability	Solution Architect	High — core capability gap
A-T06	Enterprise notification infrastructure exists and can be reused	Platform team	Low — alternative channel required
A-T07	Organisational reference data can be consumed rather than replicated and manually maintained	Architecture	Medium — maintenance overhead introduced
A-T08	Non-production environments exist for all integrated systems to support end-to-end testing	Delivery Manager	Medium — test coverage and quality risk
A-T09	The HR system supports effective-dated organisational changes	HR System Owner	Medium — scheduling approach must change

17. Constraints

Constraints are fixed conditions within which the solution must be delivered. They are not negotiable within this delivery.

Ref	Constraint	Type	Implication
C-01	The HR / Core HCM system remains the system of record for organisational data	Technical	The portal must not hold a competing master copy of employee organisational data
C-02	Existing Payroll, ITSM and Facilities systems will not be replaced or materially reconfigured	Technical	The portal must integrate with these systems as they are
C-03	Payroll changes must align to the published payroll cut-off calendar	Business	Effective dates are constrained by the payroll cycle (BRL-011)
C-04	Access provisioning and revocation must comply with the Access Management Standard	Compliance	Least-privilege and timing rules are non-negotiable (BRL-025, BRL-026)
C-05	Employee data processing must comply with applicable data protection law and the Employee Privacy Notice	Compliance	Data minimisation and access restriction are mandatory
C-06	The journey must conform to the organisational accessibility standard	Compliance	Design and testing must include accessibility conformance
C-07	The journey must use the portal design system and UX standards	Technical	No bespoke interaction patterns outside the design system
C-08	Authentication must use the enterprise identity provider	Technical	No separate credentials or access route
C-09	The internal transfer policy is owned by HR and cannot be changed by this project	Business	The solution implements policy; it does not define it
C-10	Existing internal operating procedures within Payroll, IT and Facilities are out of scope	Business	Only the interface into those functions may be changed
C-11	Where works council consultation is required, it must conclude before deployment	Compliance	May constrain the go-live date — see Q-15

18. Dependencies

18.1 System Dependencies

Ref	Dependency	Required for	Owner	Criticality
D-S01	One-Point Employee Portal platform	The entire journey	Portal Product Owner	Blocking
D-S02	HR / Core HCM system	Employee data, eligibility inputs, organisational update (S1, S3, S4)	HR Systems	Blocking
D-S03	Organisational reference data source	Controlled lists for department, location and role (S1)	To be confirmed — Q-19	Blocking
D-S04	Enterprise identity provider	Authentication and role-based visibility	Information Security	Blocking
D-S05	Payroll system	Pay, cost centre and allowance changes (S5)	Payroll	High — partial fulfilment only if unavailable
D-S06	ITSM / IAM tooling	Access provisioning and revocation (S5)	IT Service Management	High — employee unproductive on day one
D-S07	Facilities / workplace management system	Workspace, building access and equipment (S5)	Facilities	High — employee has no workspace
D-S08	Notification service	Employee and stakeholder communications	Platform	High — manual chasing returns
D-S09	Payroll calendar	Effective date validation (BRL-011)	Payroll	Medium
D-S10	Working day and holiday calendar	Effective date validation (BRL-011)	To be confirmed	Medium

18.2 Organisational and Process Dependencies

Ref	Dependency	Owner	Required by
D-O01	Ratified internal transfer policy including eligibility thresholds and exception routes	HR Process Owner	Before Deliverable 2 commences
D-O02	Agreed service levels for manager, HR, Payroll, IT and Facilities actions	Each function owner	Before Deliverable 2 commences
D-O03	A named process owner accountable for the end-to-end journey after go-live	HR	Before deployment
D-O04	Data protection assessment and sign-off on employee data handling	Data Protection Officer	Before Deliverable 8 (Security Assessment)
D-O05	Security review of access provisioning and revocation timing	Information Security	Before Deliverable 8 (Security Assessment)

Ref	Dependency	Owner	Required by
D-O06	Availability of function subject matter experts for specification workshops	All function owners	Throughout Deliverable 2
D-O07	Change management, training and communications for managers and HR users	HR and Communications	Before deployment
D-O08	Works council or employee representative consultation where required	HR and Legal	Before deployment
D-O09	Defined exception-handling process for requests falling outside standard rules	HR Process Owner	Before Deliverable 2 concludes
D-O10	Confirmed target values for KPI-01 to KPI-08	Portal Product Owner	Before deployment
D-O11	Agreed decommissioning or closure of the existing email-based route	HR Process Owner	At deployment

18.3 Critical Path Note

Critical path

Requirement analysis can complete without D-O01 being fully ratified, but solution design cannot. Eligibility thresholds (Q-01 to Q-03) and the minimum lead time (Q-04) are direct inputs to the rules the design must implement, and the feasibility of status return from downstream systems (Q-20) determines whether the consolidated progress view is achievable as specified.

These five open questions, together with D-O01 and D-O02, constitute the critical path for closure of this stage.

19. Risks

Risks identified during discovery. Scoring: Impact and Likelihood are rated High, Medium or Low. Risks rated High on both require a mitigation plan before Gate 1.

Ref	Risk	Impact	Likelihood	Mitigation	Owner
R-01	Downstream systems cannot return task status automatically	High	Medium	Confirm early via Q-20; define a manual status update fallback and a reduced-scope progress view	Solution Architect
R-02	Eligibility rules are not documented consistently across the organisation	High	High	Prioritise D-001; run a dedicated rules workshop with HR before the specification is written	HR Process Owner
R-03	Access is revoked too early or provisioned too late	High	Medium	Enforce BRL-025 and BRL-026; security review under D-005; readiness indicator per BR-033	IT / Security
R-04	Managers do not act, so requests stall within the new digital journey	High	High	Close Q-07; implement reminders and escalation (BR-036, BR-037); report on KPI-07	HR Process Owner
R-05	Effective date misaligned to the payroll cycle causing pay errors	Medium	Medium	Close Q-05; enforce BRL-011 at the point of capture rather than at fulfilment	Payroll
R-06	Low adoption because managers and HR continue to work by email	High	Medium	Change management D-007; close the email route at deployment (D-011); track KPI-02	Portal Product Owner
R-07	Sensitive personal information volunteered in the free-text reason field	Medium	Medium	Close Q-08; restrict field visibility by role; provide guidance text at the point of entry	Data Protection Officer
R-08	Scope creep into promotion, recruitment or global mobility	High	High	Hold the Section 5.2 boundary; formal change control on any addition after baseline	Portal Product Owner
R-09	Organisational reference data is incomplete or out of date, undermining controlled lists	High	Medium	Validate A-B05 early; agree a data remediation and ownership plan with HR Operations	HR Operations
R-10	End-to-end testing is constrained by the availability of downstream test environments	Medium	High	Confirm A-T08 early; secure environment commitments as part of D-006	Delivery Manager

Ref	Risk	Impact	Likelihood	Mitigation	Owner
R-11	Works council consultation delays deployment	Medium	Low	Close Q-15 at the earliest opportunity; engage HR and Legal now	HR / Legal
R-12	Employees raise requests for roles that are unfunded or do not exist	Medium	Medium	Close Q-10 and Q-12; constrain the role list and confirm the funding validation route	HR / Finance

20. Open Questions

Open questions must be closed before the deliverable indicated. Each carries a named owner and a target closure point. Questions on the critical path are marked.

20.1 Business Open Questions

Ref	Question	Impact if unresolved	Owner	Close by
Q-01	What minimum tenure in the current role is required before a transfer may be requested (BRL-002)?	Eligibility cannot be enforced systematically	HR Process Owner	Gate 1 — critical path
Q-02	Are employees within probation ever eligible, and who approves the exception (BRL-003)?	Ambiguous and inconsistent rejections	HR Process Owner	Gate 1 — critical path
Q-03	What cooling-off period applies between a completed transfer and a new request (BRL-005)?	Repeat requests cannot be managed	HR Process Owner	Gate 1 — critical path
Q-04	What minimum lead time is required between submission and the effective date (BRL-010)?	Fulfilment cannot be guaranteed by the effective date	HR, IT, Facilities jointly	Gate 1 — critical path
Q-05	How must the effective date align to the payroll cut-off (BRL-011)?	Mid-period pay errors and retrospective corrections	Payroll	Gate 1
Q-06	Is receiving-manager confirmation mandatory in all cases, or only where a named manager exists (BRL-016)?	Approval routing cannot be finalised	HR Process Owner	Gate 1 — critical path
Q-07	What are the escalation timeframes and the escalation path for stakeholder inaction (BRL-018)?	Requests stall silently; pain point P4 persists in digital form	HR Process Owner	Gate 1 — critical path
Q-08	Who may read the optional reason for transfer (BRL-032)?	Data protection and employee relations exposure	Data Protection Officer	Deliverable 2
Q-09	What retention period applies to transfer request records (BRL-035)?	Compliance gap against the retention schedule	Data Protection Officer	Deliverable 2
Q-10	May the employee select any role, or only roles currently open as vacancies?	Materially changes the capture experience and reference data requirement	HR and Talent Acquisition	Gate 1
Q-11	Does an internal transfer require a competitive selection process, or is it a direct move?	Determines whether recruitment activity falls within the journey	HR and Talent Acquisition	Gate 1

Ref	Question	Impact if unresolved	Owner	Close by
Q-12	How are headcount and budget availability in the receiving unit confirmed, and by whom?	Transfers may be approved that cannot be funded	Finance and HR	Deliverable 2
Q-13	Can a transfer be reversed after approval but before the effective date, and on whose authority?	No defined cancellation path after S4	HR Process Owner	Deliverable 2
Q-14	Do location changes trigger relocation, mobility or right-to-work considerations within scope?	Compliance exposure; possible scope expansion	HR Mobility	Gate 1
Q-15	Is works council or employee representative consultation required for this process change?	Deployment may be blocked late	HR and Legal	Deliverable 2
Q-16	Are contractors, temporary staff, part-time and fixed-term employees in scope?	The eligible population is undefined	HR Process Owner	Gate 1
Q-17	What languages and accessibility conformance level must the journey support?	Late rework in design and build	Portal Product Owner	Deliverable 2
Q-18	What are the agreed baselines and target values for KPI-01 to KPI-08?	Success cannot be evidenced and benefits cannot be claimed	Portal Product Owner	Deliverable 2

20.2 Technical Open Questions

Ref	Question	Impact if unresolved	Owner	Close by
Q-19	Which system is authoritative for department, location and role reference data?	Controlled lists cannot be sourced reliably	Architecture	Gate 1 — critical path
Q-20	Can Payroll, ITSM and Facilities systems both receive a task and return its status?	The consolidated progress view required by BR-013 may not be achievable	Architecture and system owners	Gate 1 — critical path
Q-21	Does the HR system support effective-dated organisational changes, or must changes be applied on the date itself?	Affects scheduling design and compliance with BRL-025 and BRL-026	HR System Owner	Deliverable 2
Q-22	How is a partial failure handled — for example, HR updated but IT provisioning failed?	Inconsistent state across systems of record	Architecture	Deliverable 2
Q-23	Is a shared correlation identifier available across HR, Payroll, IT and Facilities records?	Status cannot be reliably aggregated per request	Architecture	Deliverable 2
Q-24	What are the agreed availability,	Non-functional	Architecture and	Deliverable 2

Ref	Question	Impact if unresolved	Owner	Close by
	performance and volume targets for the journey?	requirements remain unquantified	Product Owner	
Q-25	Can manager and HR actions be completed within the portal, or must the actor switch to another system?	Directly affects the single-journey objective	Architecture	Gate 1
Q-26	How will the journey be tested end to end given the number of integrated downstream systems?	Late defect discovery and quality risk	Delivery Manager	Deliverable 2
Q-27	What is the fallback where a downstream system is unavailable at the point a task must be raised?	Requests may fail silently at S5	Architecture	Deliverable 2

21. Requirements Traceability Matrix

The matrix demonstrates that every requirement stated in the original business brief is addressed, and traces each to the objective it serves, the journey stage in which it occurs, the rules that govern it and the requirement that delivers it.

Brief requirement	Objective	Stage	Business req.	Governing rules
Employee can initiate an Internal Transfer Request from the portal	OBJ-01	S1	BR-001, BR-007	BRL-001 to BRL-006
Select the proposed new department / business unit	OBJ-01	S1	BR-002	BRL-007, BRL-008, BRL-009
Select the proposed new location	OBJ-01	S1	BR-003	BRL-007, BRL-008, BRL-009
Select the proposed role / job position	OBJ-01	S1	BR-004	BRL-007, BRL-008, BRL-009
Provide an effective date	OBJ-07	S1	BR-005	BRL-010, BRL-011
Provide an optional reason for the transfer	OBJ-01	S1	BR-006	BRL-007, BRL-032
Submit the request	OBJ-01	S1	BR-007, BR-010	BRL-006, BRL-012
View the current status of the request	OBJ-02	S1 to S6	BR-011, BR-014	BRL-030, BRL-031
View actions pending with other stakeholders	OBJ-02	S2 to S5	BR-012	BRL-030, BRL-038
Portal orchestrates downstream activities	OBJ-03	S4 to S5	BR-025 to BR-033	BRL-022 to BRL-029
Employee receives a single view of progress	OBJ-02	S1 to S6	BR-013	BRL-030, BRL-039
Employee receives confirmation	OBJ-07	S6	BR-040	BRL-027
Manager confirms the transfer	OBJ-05	S2	BR-018, BR-019	BRL-015 to BRL-017
HR validates eligibility	OBJ-05	S3	BR-020, BR-021, BR-022	BRL-001 to BRL-006, BRL-019
Organisational information is updated	OBJ-07	S4	BR-025	BRL-022
Payroll is updated where required	OBJ-07	S5	BR-026, BR-027, BR-028	BRL-023, BRL-024
IT provisions or removes access	OBJ-07	S5	BR-031, BR-032	BRL-025, BRL-026
Facilities arranges the new location	OBJ-07	S5	BR-026, BR-028	BRL-023, BRL-024

22. Stage Exit Criteria and Next Steps

22.1 Exit Criteria for Deliverable 1

This deliverable is complete, and Deliverable 2 (Feature Specification and Acceptance Criteria) may commence, when all of the following are satisfied.

Ref	Exit criterion	Evidence	Status
EC-01	The business objective and success measures are approved	Section 1.4 signed by the Portal Product Owner and HR Process Owner	Open
EC-02	Journey stages and the employee-facing status model are agreed by all four downstream functions	Review comments closed; Section 7 baselined	Open
EC-03	All business rules are reviewed, with every TBC value either resolved or formally accepted as deferred with a named owner and date	Section 10 with no unowned TBC entries	Open
EC-04	Critical-path open questions Q-01 to Q-04, Q-06, Q-07, Q-19 and Q-20 are closed	Section 20 updated with recorded answers	Open
EC-05	All assumptions are validated, or converted into a confirmed decision, a constraint or a risk	Section 16 updated	Open
EC-06	All dependencies have a named owner and a confirmed availability date	Section 18 updated	Open
EC-07	The scope boundary is signed off and change control is agreed	Section 5 baselined	Open
EC-08	Business and technical decisions are agreed as correctly classified	Section 15 reviewed by HR and Architecture jointly	Open
EC-09	Risks rated High on both impact and likelihood have an agreed mitigation owner and plan	Section 19 updated for R-02, R-04 and R-08	Open
EC-10	The document is baselined at version 1.0 and placed under change control	Version history updated; approval table complete	Open

22.2 Next Steps

Step	Action	Owner	Timing
1	Circulate this document to the distribution list for review	Lead Business Analyst	On issue
2	Hold a business rules workshop with HR to close Q-01 to Q-04, Q-06 and Q-07	HR Process Owner and Lead BA	Within 2 weeks
3	Hold a technical feasibility session with downstream system owners to close Q-19 and Q-	Solution Architect	Within 2 weeks

Step	Action	Owner	Timing
	20		
4	Obtain and review the internal transfer policy (D-O01)	HR Process Owner	Within 2 weeks
5	Agree service levels for each stakeholder action (D-O02)	Each function owner	Within 3 weeks
6	Consolidate review comments and issue version 1.1	Lead Business Analyst	Within 3 weeks
7	Obtain formal sign-off per Section 1.4	Portal Product Owner	Within 4 weeks
8	Baseline the document and commence Deliverable 2 — Feature Specification (.spec.md)	Lead Business Analyst	On sign-off

23. Glossary

Term	Definition
Business rule	A policy constraint that governs how the journey must behave, owned by the business rather than by the delivery team
Downstream fulfilment	The Payroll, IT and Facilities activities required to give practical effect to an approved transfer
Effective date	The date from which the transfer takes effect for organisational, payroll, access and workplace purposes
Eligibility validation	The HR assessment of a request against internal transfer policy at stage S3
Acceptance criterion	An individually identifiable, testable statement of the condition a requirement must satisfy in order to be accepted
Gate 1	The peer review control point at which the specification, acceptance criteria, API contract and test cases are reviewed before planning begins
Gate 2	The control point at which implementation evidence, passing tests, security assessment and traceability are reviewed before release
Internal transfer	A move of an employee between departments, roles or locations within the same legal entity
INT SDD	The staged solution design and delivery methodology under which this deliverable is produced
MoSCoW	A prioritisation scheme classifying requirements as Must, Should, Could or Won't have
One-Point Employee Portal (OPEP)	The organisation's single employee-facing portal for HR, payroll, IT, learning, facilities and other employee services
Orchestration	Coordination of downstream activities across multiple systems and teams from a single controlling process
Pending action	An outstanding step that a named stakeholder must complete before the request can progress
RACI	A responsibility model identifying who is Responsible, Accountable, Consulted and Informed for each activity
Receiving manager	The manager of the team or department into which the employee proposes to transfer
Stage gate	A formal control point at which progression to the next stage requires a recorded decision
System of record	The authoritative source for a given data domain, against which all other copies are reconciled
TBC	To be confirmed — a value the business has not yet fixed, cross-referenced to an open question

Appendix A — Current State versus To-Be Comparison

Dimension	Current state	To-be state
Entry point	Informal conversation or email	Single structured request in the One-Point Employee Portal
Request record	None; scattered across inboxes	One structured record with a unique reference
Approval	Email confirmation with no fixed format	Structured decision with mandatory reason and recorded authority
Eligibility check	Manual, applied by individual judgement	Rule-based evaluation presented to HR, with HR retaining the decision
Downstream trigger	Manual, dependent on someone remembering	Automatic, rule-based, raised by the portal
Downstream execution	Sequential	Parallel
Status visibility	None; the employee must chase each team	Consolidated real-time view naming the pending action holder
Escalation	None; requests stall silently	Reminders and defined escalation on breach of service level
Audit trail	Partial, held in email	Complete and immutable, covering every state change
Failure handling	Undetected until the employee complains	On Hold status with HR notification and exception handling
Management information	None	Structured data on volume, cycle time, stage duration and outcome

Appendix B — Document Change Control

Following approval, this document is baselined. Any subsequent change to scope, business rules or requirements follows the process below.

Step	Activity	Owner
1	Change request raised describing the change and the business justification	Requestor
2	Impact assessment covering scope, cost, timeline, risk and affected requirements	Lead BA and Solution Architect
3	Review by the Portal Product Owner and HR Process Owner	Approvers
4	Decision recorded as Approved, Rejected or Deferred	Portal Product Owner
5	Document updated, version incremented, distribution list notified	Lead Business Analyst
6	Downstream artefacts (.spec.md, acceptance criteria, test cases, .plan.md, .tasks.md) updated for traceability	Lead Business Analyst
7	Traceability matrix in Section 21 re-verified	Lead Business Analyst

Step	Activity	Owner

End of document.
